Lead Software Engineer with 4+ years of experience building scalable AI/LLM and agentic-AI applications with React and TypeScript. Leads end-to-end frontend delivery for enterprise platforms, including real-time workflows, Azure AD authentication, role-based access, and API integrations. Recipient of two Annual Awards of Excellence and an ACE Individual Award for contributions to Process Intel, Doc-Intel, and GenAI Studio.

Skills

Frontend	React.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Material UI, Redux
Architecture & APIs	Micro-frontends, REST APIs, WebSockets, Server-Sent Events (SSE), Streaming APIs, API Integration
Authentication & Testing	Azure AD, MSAL, Role-Based Access Control (RBAC), Jest, React Testing Library
Tools	Git, GitHub, Vite, Chrome DevTools, GitHub Copilot, Cursor

Experience

Lead Software Engineer **Jan 2026 — Present**
Persistent Systems

- Led frontend architecture and end-to-end UI delivery for Process Intel, an agentic-AI process intelligence platform recognized with the Annual Award of Excellence.
- Built key frontend capabilities for GenAI Studio, an enterprise GenAI catalogue and demo platform, receiving the ACE Individual Award for individual contribution.
- Leading frontend delivery for AI/LLM-driven enterprise applications using React, TypeScript, Vite, Tailwind CSS, Azure AD, and MSAL - from requirement discovery and UX/API-flow design through implementation, integration, testing, and release.
- Design scalable, reusable interfaces for real-time and asynchronous AI workflows, including streamed responses, job polling, agent/workflow visualization, role-based access control, enterprise administration, and design-system standards.

Senior Software Engineer **Jul 2024 — Jan 2026**
Persistent Systems

- Contributed to Doc-Intel, an intelligent document-processing platform with LLM-powered bounding-box detection; the project received the Annual Award of Excellence.
- Led UI modernization for key platforms, cutting average page load by ~40% and reducing user-reported UI/UX issues by ~80% after release, enforcing best practices in testing and performance.
- Mentored junior developers on UI/UX standards and React patterns, accelerating team productivity.

Software Engineer **Jun 2022 — Jul 2024**
Persistent Systems

- Completed .NET full-stack engineering training, developing foundational knowledge of APIs, databases, and application development.
- Worked on low-code/no-code application development using enterprise platforms and completed relevant platform certifications before transitioning into frontend engineering.
- Built responsive React.js frontends for internal enterprise platforms using Redux, Material UI, and Tailwind CSS; integrated REST APIs, WebSockets, and streaming APIs with CTO Unit teams to deliver performant, reliable real-time user experiences.

Projects

Process Intel

- Designed and delivered the Process Intel product UI, including the theme system, color tokens, motion, and interaction patterns, using React, TypeScript, Vite, Tailwind CSS, React Flow, Azure MSAL, and asynchronous job polling.
- Built SOP-to-agentic workflow experiences for qualification, document extraction, agent/tool configuration, execution, YAML generation, and inline LLM evaluation; influenced frontend architecture, UX, API workflows, role-based administration, usage controls, and approval flows.

GenAI Studio

- Built a React frontend using Tailwind CSS, Redux Toolkit, Axios, and Azure AD SSO/MSAL for an enterprise GenAI catalogue and demo platform with Admin, Editor, and Viewer roles; delivered catalogue CRUD, publishing workflows, Excel bulk import, user/POC management, drag-and-drop catalogue assembly, and location-aware browsing.
- Integrated Microsoft Graph API permissions to securely access SharePoint-hosted presentations and demo videos, enabling in-app preview of demo materials through embedded iframe experiences.

Threat Hunting

- Built a React, TypeScript, and Vite single-page application that converts PDF uploads into a five-stage security investigation workflow: extraction, AI summarization, threat-intelligence enrichment, SIEM hunting, and PDF reporting.
- Integrated VirusTotal, AbuseIPDB, OTX, and Sumo Logic through typed API services, polling, resilient stage handling, IOC review, report preview/download, and an in-app SOC review chat experience.

Agent-Recon

- Built an AI-powered chat interface with real-time streamed responses, thread-based conversations, multi-step agent reasoning visualization, responsive layouts, and dark/light themes.
- Implemented Azure AD authentication through MSAL, a dynamic dashboard, and administrative workflows for user management and access requests.

PiBox

- Built a hackathon and innovation event-management portal used by 10,000+ participants, featuring role-based Azure AD authentication, complex enterprise data tables, dynamic filtering, multi-column sorting, autocomplete search, and responsive workflows.

Additional AI Platforms

- Delivered React and TypeScript capabilities across Doc-Intel, Sci-Mitra, GenAIHub, AgentStudio, Security-Copilot, Netsynx, and other agentic-AI POCs, including multi-agent chat, session management, document/source-citation preview, LLM-powered document bounding boxes, multi-persona dashboards, SSE/WebSocket streaming, and A2A integrations.

Awards & Certifications

- Annual Award of Excellence - Process Intel Team (2026)
- ACE Individual Award - GenAI Studio (2026)
- Annual Award of Excellence - Doc Intel Team (2025)
- Bravo Team Award (2024, 2025, 2026)
- High Five Team Award (2025, 2024)
- Java Fullstack (React) Certification - Persistent Systems

Education

Bachelor of Engineering, *Computer Science, Savitribai Phule Pune University* Jun 2018 — Jun 2022
CGPA: 8.87
